

Energy Legislation and Policy

As energy markets and technology evolve, antiquated and unfair laws and regulations threaten to stifle market innovation. And the future of your business.

Intransigent government decision-making. Unnecessarily aggressive or unwise regulation. We can help you change the laws and regulations to protect and grow your business. Whether your interest is renewable energy, fossil fuels, project finance, taxes, or market preservation, we know how to work your ideas through complex statutory and regulatory requirements — or change them. Let us address your concern and advocate for your ideas.

Representative experience

Prepared comments to DOE on the LNG Export Study for the Cove Point facility for Sumitomo of Japan and GAIL of India.

Advise Gas Technology Institute and GE Oil and Gas on developing federal legislation to provide funding for natural gas exploration and development technology RD&D.

Actively counseling Anschutz Company, Xcel Energy, PIMA, and many other energy industry clients in government relations efforts related to energy legislation.

Filed export applications for Delfin LNG LLC and Venture Global LLC.

Advise G2 FLNG LLC on the process for filing LNG export permit applications at both DoE and FERC.
