

Power: Thermal Power

The growth of energy-generating methods and increased market competition has brought new participants into this sector. And it has raised new challenges for those already involved. Whether you have a complex transaction or development project, need to navigate regulation, resolve a contentious dispute, or protect your next-generation power technology, we are there to advise you.

The power group at Hogan Lovells works with major power and utility companies; independent power generators; financial institutions, including lenders and investment funds; and governments.

Representative experience

Representing one of the largest public utilities in the U.S. in connection with its proposed US\$5bn expansion of its transmission facilities.

Advising a large international utility contemplating the acquisition and development of high voltage transmission facilities that would be subject to incentive-based transmission pricing.

Assisting the power project developer in connection with option to lease land from municipal agency for construction of new gas-fired power project.

Advising AES Corporation on the restructuring and refinancing of a 625MW gas-fired power plant in Argentina and related transmission line from Argentina to Chile.
