

Networks and Platforms

Effective IT and network infrastructure is crucial to the efficient running of modern businesses. Investing in current technology, including cloud computing, can offer you, your customers, and your clients increased reliability and scalability.

We can help you address the challenges posed by investing and adopting new technologies: tackling the negotiation of commercial and outsourcing contracts, disputes related to technology failure, and technology acquisition.

Our team of lawyers, many of whom have an IT-industry background, can help you to navigate through the legal and commercial aspects of these transactions so your business remains competitive in today's ever-changing and increasingly competitive markets.

Representative experience

Advising a multinational IT services company on cloud computing advice in close to 40 countries.

Advising XO Communications on the commercial and regulatory requirements for obtaining and extending international communication services to and establishing businesses in more than 30 countries.

Advising an international company in connection with its bid to operate, maintain, and support (on an outsourced basis) masts and infrastructure of a UK mobile network operator.

Defending Europol in a challenge brought before the EGC regarding procurement of Europol's document management

Practices

Communications, Internet,
and Media

system, involving complex issues of customization of IT solutions.
