

Cyber Risk Services

The cyber threat landscape is evolving daily. To stay in front of it, you need comprehensive, timely advice and solutions to your organization's unique challenges.

That's why our team includes technical and risk professionals. Working side by side with our market-leading lawyers, our professionals ensure that clients receive tightly integrated and complementary legal, technical, and management counsel, creating a seamless experience appropriately protected by attorney-client privilege.

The technical knowledge and training of our consultants and lawyers allows us to work directly with a client's IT security team, as well as in-house counsel, with no lost time for "translation" of specialized terminology or concepts. And our experience within, and working with, law enforcement and other government agencies enables us to counsel and support internal investigations, litigation, and other external interactions with practical, informed advice.
