

Digital Health

Technology is changing the way the health care industry operates. With changes come new challenges and opportunities — as well as a dramatic shift in the competitive and regulatory landscape. We bring a real-world sensibility to your challenges, helping you to remain competitive and compliant everywhere you operate. Our cross-jurisdictional team of more than 40 life sciences and health care lawyers with a focus on digital health take a technology-based approach to counseling on digital health products and services. We provide you with strategic guidance on how to leverage opportunities for growth, minimize legal barriers, comply with rules, protect your data, and realize its value.

Our team advises on the design, approval process, and regulation of digital health products. We also regularly work with companies and health care providers on pricing and reimbursement frameworks. We advise on all aspects of health privacy and cybersecurity, including breach response, risk assessment, privacy policies, and transactions. We help navigate collaborative arrangements such as commercial joint ventures and research studies and provide full commercial and corporate support for transactions. We advise across the full spectrum of deal aspects including intellectual property rights, licensing, data exploitation, and risk. We also regularly counsel on risk mitigation strategies for liability, providing preventative strategies for product liability, professional liability and negligence, as well as helping you step by step should new liabilities arise.
